ABOUT BOLD

Headquarters in Jaraguá do Sul / Santa Catarina.

The world
**inspires us to
create, the market
motivates us to
grow.**

With a trajectory that transmits dedication, strength and commitment, Bold is driven by the continuous desire for growth, operating for more than 20 years adding to the markets of visual communication, industry and civil construction, cutting-edge technologies and innovation, providing customers with the best solutions with willingness and agility.

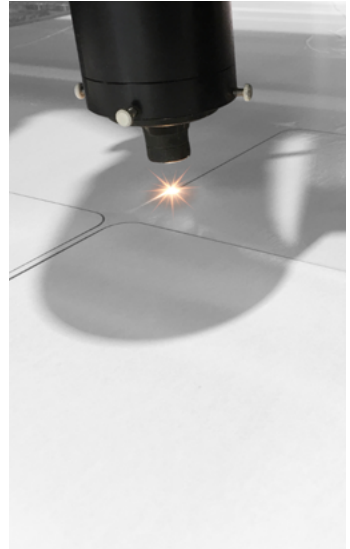

Growing is not a mere desire, it is a goal that every year has been achieved and overcome. For this, efficiency and speed go together, making it possible to do more with less, aiming at progress in a sustainable and profitable way.

To say that Bold has the best products is not just a marketing move, it is taking responsibility for the results themselves. The company always values truth and competence, ensuring products that meet the strictest quality standards of the national and international market.

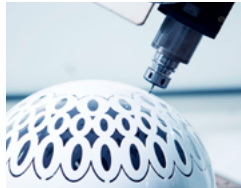

More agility in the delivery of your projects.

Bold offers a variety of services and solutions to facilitate the production of your parts by sending them pre-processed as needed, increasing their performance and production flow.

ACP EASYBOLD AND ENGEBOLD

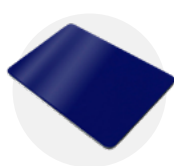

The Easybold ACP has a thickness of 3mm and polyester paint, on aluminum blades 0.21/0.18mm. Lightweight, flexible and easy to handle, it is generally used indoors and in facades, attributing modernity and beauty to projects.

The Engebold ACP has a thickness of 4mm with 0.30/0.30mm aluminum blades and Kynar PVDF paint. High performance material for external coatings, resistant and with protection

against U.V rays, which provides color durability. Suitable for permanent architectural and civil construction works.

The ACP Engebold FR II-A is ideal for large civil works, as it combines the reliability of the traditional ACP Engebold and the safety provided by its flame-burning properties. This product consists of a class II-A flame-burning mineral core, surrounded by two 3000 family aluminum blades.

PVC AND OTHER PLASTICS

Expanded PVC

Material widely used in internal and external visual communication, as it is weather resistant. It has a great surface for ink application and UV printing.

PETG

Transparent thermoplastic that can be hot stamped, thermoformed, machined, painted and even cold folded.

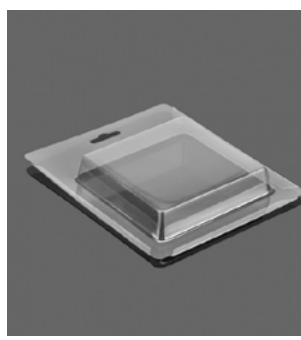

Ps

Material of great cost benefit and with great thermal and mechanical resistance.

Also available in the options:

Mirrored, High Impact, Trilayer and Clear

LAUNCH

BOLD FLEX BANNERS

Bold is increasingly looking to expand its product portfolio in order to offer complete solutions to our customers.

Bold Flex Banners are designed considering the need for quality products that are both veritable and standardized but associated with an excellent cost benefit.

Our line of Flex Banners contemplates the main demands and applications of the visual communication market, being compatible with all digital printing technologies.

Options

BOLD FLEX BANNER280

Model indicated for promotional campaigns and short duration, are the ideal option for banners, banners, decoration stands, and others.
